Corporate Introduction

Midea Group

From its humble beginnings in 1968, Midea has developed into a large corporation, covering HVAC, appliances, lighting, industrial components, logistics, and real estate. Its 40 years of relentless growth has brought its global turnover to \$14 billion USD in 2009. Consequently, Midea has created over 150,000 jobs both within China and all over the world. In addition to providing affordable goods to consumers worldwide, Midea is a responsible corporate citizen, and has contributed to several social causes.

Midea believes in creating value through rapid response to market demands, cost-efficient operations and consumer satisfaction. As a result, Midea wields vast production capacities to meet these demands, a fully integrated manufacturing process, and a comprehensive range of affordable, high-quality products to serve its global customers.

Today, Midea is a home appliance leader in China. The company continues to actively globalize its operation by opening plants in Vietnam, Belarus and Egypt. Additionally, Midea has several forthcoming plants in order to offer enhanced products and services closer to the market.

Midea TID

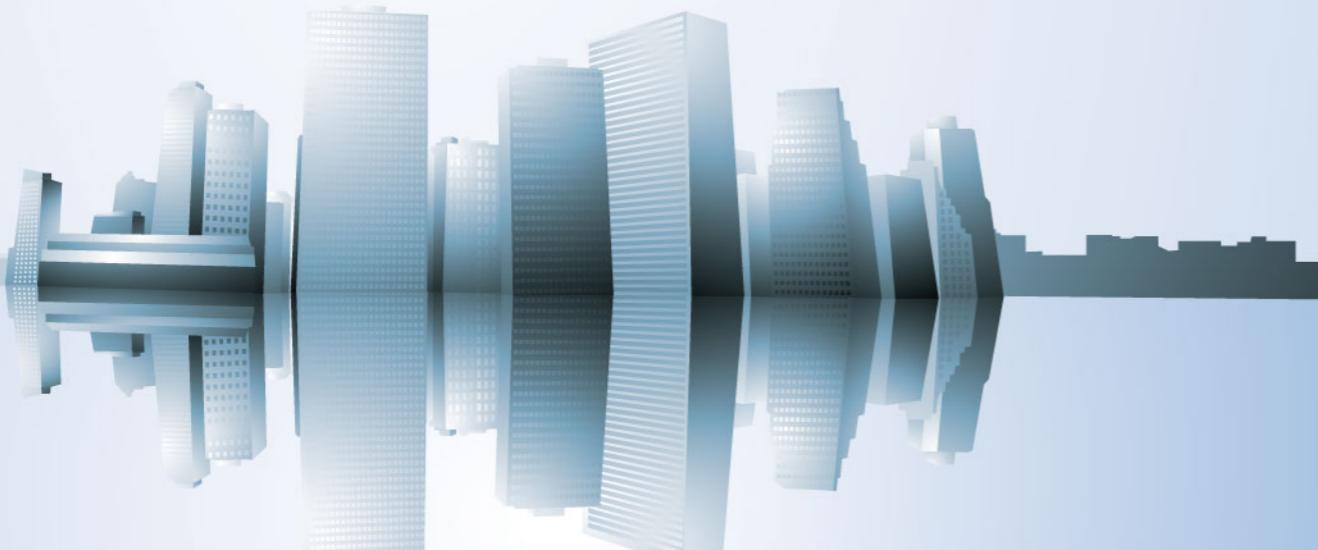

As a key part of Midea Group, The International Division (TID) of Midea Air-conditioning and Refrigeration Sector is a comprehensive export platform for residential and commercial air-conditioners, washing machines, refrigerators and heat pump water heaters. As a result, the division provides top-class service to customers worldwide.

With the core values, "safety, quality, cost and efficiency," Midea TID has achieved significant international growth while successfully maintaining leadership in RAC, CAC, washing machine and refrigerator exports. Now, the competitive advantages of innovation, production capacity and dedicated support services have made Midea TID a leading white goods supplier in the global market.

Product introduction

Midea R410A Tropical Packaged Air Conditioners are designed and manufactured to meet the requirements of the severe climatic conditions and are built specifically for outdoor installations, either on ground or roof level. The R410A Tropical Packaged Air Conditioners are ideal for warehouses, large halls, schools, residences, or wherever the requirement is for a heavy duty unit with a hermetic scroll compressor.

The units are available in 5 different sizes from 5 to 20 ton nominal (17.5 to 70 kW) in 50Hz. The units are designed to operate in a wide ambient temperature range from 14°F (-10°C) to 125.6°F (52°C) and even lower if an optional head pressure control system is provided.

R410A Tropical Packaged Air Conditioners are completely assembled, internally wired, charged with R410A refrigerant at factory, tested before ship and ready for installation. All that is required on site is connecting ducting and power supply. This greatly reduces installation work and costs. They are designed for ducted systems which will enable them to be installed on rooftops or on the ground.

Features and benefits →

Features and benefits

Outstanding reliability

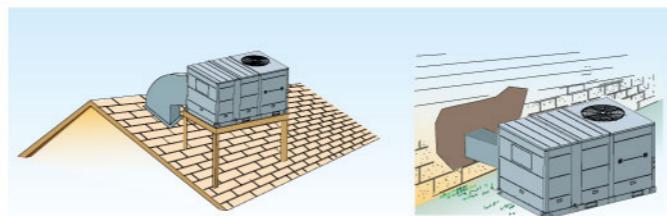

The rational design of Midea reduces the risk of defects, while the high efficiency allows saving on energy consumption and therefore on system costs. Midea is therefore the ideal solution for all applications in the residential, tertiary and industrial sectors with simultaneous heating and cooling load requirements. Total comfort, reliability and saving for large commercial surface areas.

Excellent efficiency

- High efficiency scroll compressor.
- High EER.

Design flexibility

- Install only when the capacity is required.
- Rooftop or ground installation is optional.
- Anywhere removable as requirement without fixed.

Easy to install, service and maintain

- Installer no need enter indoor, only out-of-doors.
- Compact size and integrate indoor unit and outdoor unit, save the transportation, lifting and installation cost.
- Most components are standard.
- Heat exchanger is easy for clean and maintenance.
- A complete factory run test is performed on each unit without any potential start up problem.

Advanced control system

- Operates only the capacity required by the load.
- Operates at peak efficiency at any given load.

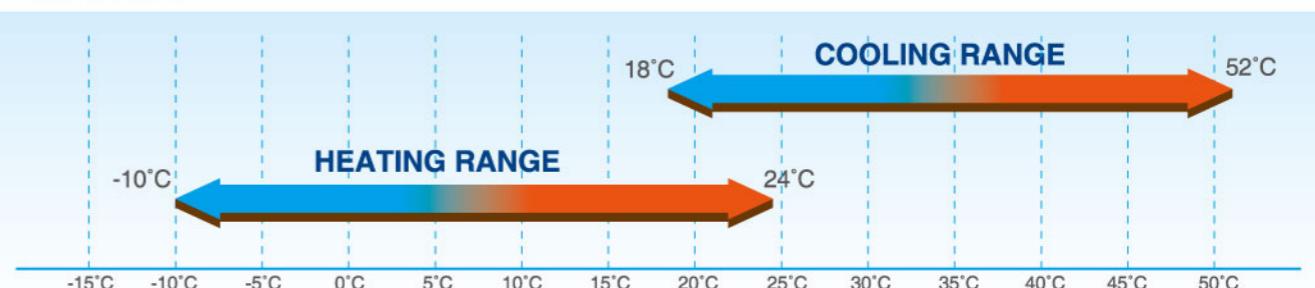

Durable construction

- Pre-painted exterior cabinet panels pass 1000-hour Salt Spray Test for durability.
- Weather-resistant construction with capped seams and sloped top panels.
- G90 galvanized heavy gauge plate conforming to ASTM-A-653, Zinc content of galvanized plate is 275 g/m².

Wide range of operation temperature

Wide range of operating temperature, cool operating range up to 52°C in tropical model and heating down to -10°C ambient.

Environmental friendly R410A refrigerant

- Chlorine-free and environmental friendly refrigerant, zero ozone depletion potential .
- High density refrigerant, therefore, less refrigerant required.
- Leak-tight refrigerant circuit, Brazed refrigerant connections for increased leak-tightness.

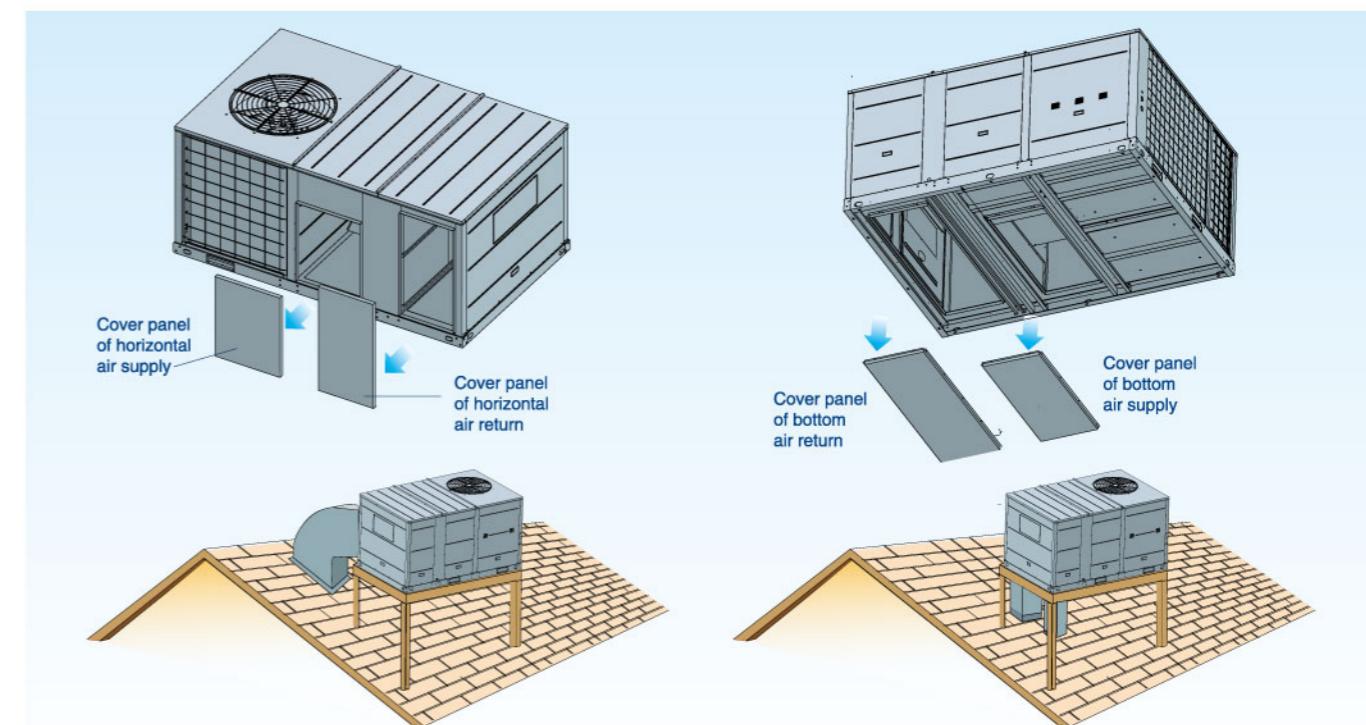

External pressure gauge ports

To external pressure gauge ports, which are permanently identified embossed wording that clearly identifies the compressor circuit, high pressure connection and low pressure connection. With the gauge ports mounted externally, an accurate diagnostic of system operation can be performed quickly and easily without disrupting airflow.

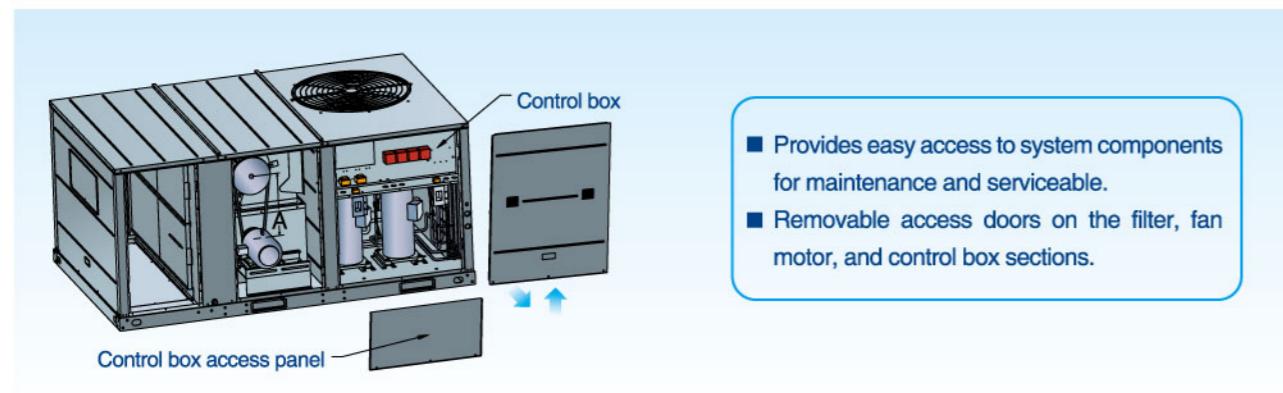

Convertible airflow

The unit ship in a horizontal configuration. They can be easily converted to downflow by simple moving two panels. The air inlet & outlet with horizontal duct flanges are convenient and quick to connect the duct, so the connection needn't to field fabricate, high efficiency and economic connection to flanges.

Easy access doors

- Provides easy access to system components for maintenance and serviceable.
- Removable access doors on the filter, fan motor, and control box sections.

Belt drive motor (Three phase, except 5ton)

For additional static requirements, precedent three-phase belt drive motors offer capability for a wide range of airflow needs.

Motor pulley (Except 5ton)

The adjustable motor pulley can easily be adjusted by loosening the bolts on either side of the motor mounted. Removing the bolts allows for easy removal of the motor pulley by pushing the motor assembly up to loosen the belt. Once the belt is removed, the motor sheave can be adjusted to the desired position.

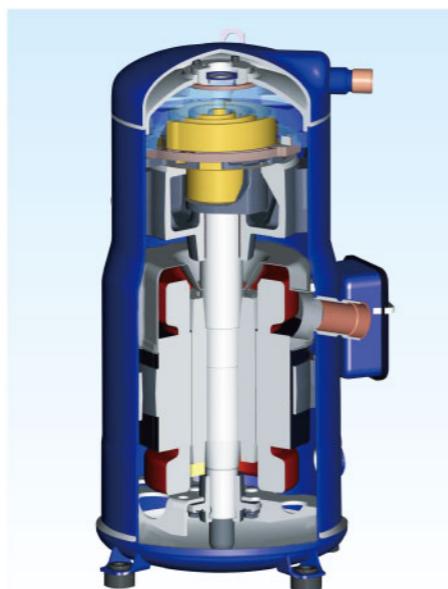

High efficiency scroll compressor

- Provide maximum reliability, efficiency and quiet operation.
- Two refrigerant circuits on larger units (above 12.5ton) provide efficient part load performance.
- Standard low and high pressure safety switches.

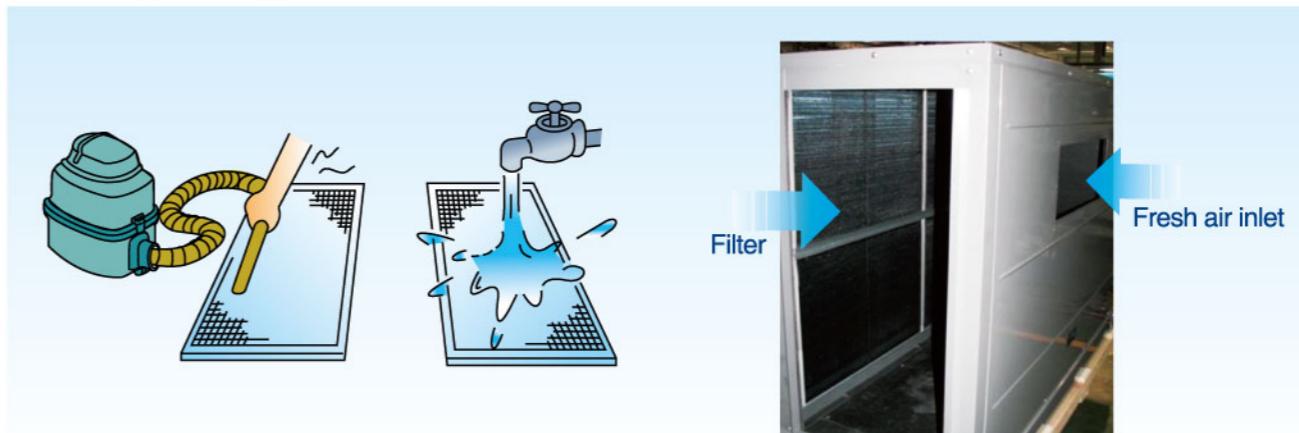

Well compressor control

Compressor staging is controlled directly by the control temperature. When the control temperature is warmer than the cooling set point, cooling is staged up; when the control temperature is cooler than the cooling set point, cooling is staged down. However, a stage change can only occur when the control temperature is outside the dead band. Staging is constrained by an inter-stage delay timer. These constraints protect the compressors from short cycling while eliminating temperature variations near the diffusers.

Recyclable and washable filter

Conveniently and easily remove and install, to save the maintenance cost.

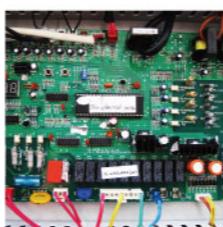

Easy drainage

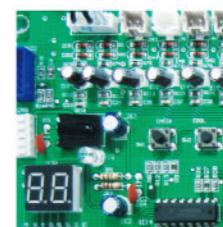

External drainage port reserved, quickly and accurately connect the rubber drainage pipe.

Low voltage connections

The wiring of the low voltage connections to the unit and the zone sensors is as simple as the picture. This simplified system makes it easy for the installer to wiring.

System self diagnostic

The system self-diagnostic function, press the "check" button before start up, the LED displays the normal checking code. When the unit is in running with abnormal operation, the LED will display the malfunction code and the unit will stop running to protect the unit.

Standard features →

Standard features

Be able to work continuously in high ambient temperature up to 52°C

High efficiency and high reliability scroll compressor

Discharge temperature protection for compressor

Environmental friendly R410A refrigerant

Condenser's high temperature protection

Indoor fan overload of current protection

Temperature sensor on/off protection

High/Low pressure switch protection

Evaporator anti-freezing protection

Outdoor fan integrate protection

Compressor integrate protection

Compressor current protection

Anti-cold protection

Phase monitor

Washable filter

*Belt driving motors

*Rubber drain pipe

Stainless steel bolt

Convertible airflow

Crankcase heaters

Metal condenser fan

Quickly access doors

*Fresh air intake function

*Thermal expansion valve

Cooling & heating thermostat

All coils are tested at 450psig

External pressure gauge port

Wired controller KJR-12B/DP (T)-E

*Adjustable fan motor mounting track

Easy access low voltage terminal board

Forward curved design of blower wheels

Salt spray test of steel sheet for 1000 hours

*Belt driven & forward curved blower for air supply

Copper tube+hydrophilic aluminium fin heat-exchanger

G90 galvanized heavy gauge plate conforming to ASTMA 653

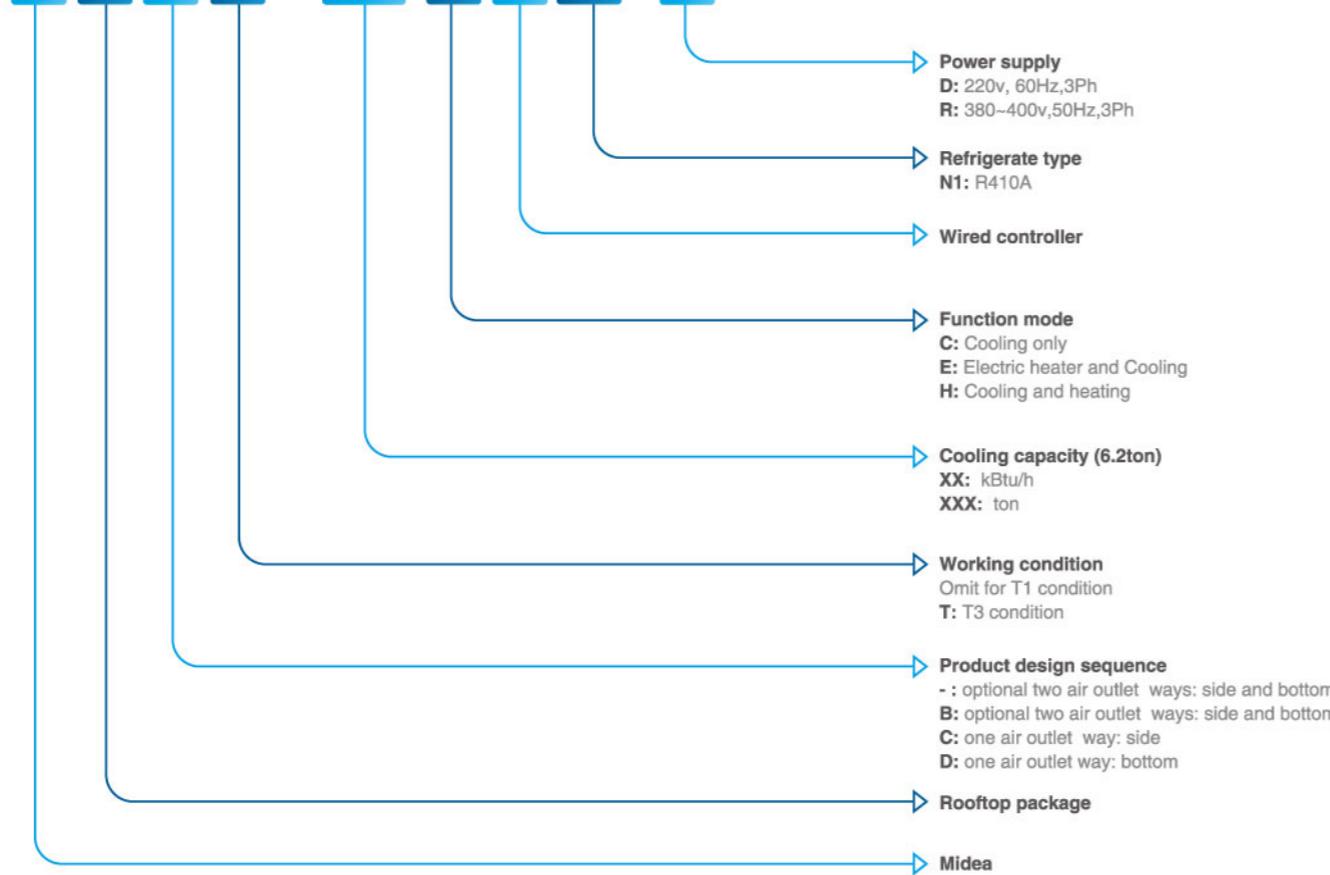

Note: The item with "*" will not be applied to 5ton.

Wired controller

Wired controller is a human-machine interaction(HMI) used for the communication between indoor & outdoor and main board. The setting and operation can be sent to main board and the running condition can be displayed by the wired controller.

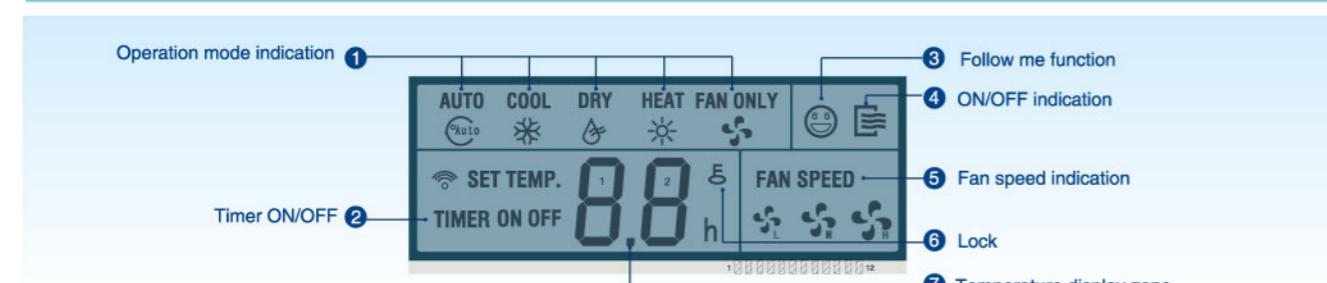

Standard wired controller:KJR-12B/DP (T)-E

Feature

- Easier to read because LCD screen is larger.
- Digital display lets you set temperature in 1°C units.
- Built in a thermostat sensor that makes more comfortable room temperature control.
- Simply and conveniently select cool/heat/fan operation mode
- Economical operation power supply 5V DC.
- Wide operation temperature from -15°C to +43°C.
- Wide operation humidity from 40% to 90%, RH.
- Timer for rest time.

Name and function of indicators on the controller

Optional wired controller

For cooling only and cooling with auxiliary heater

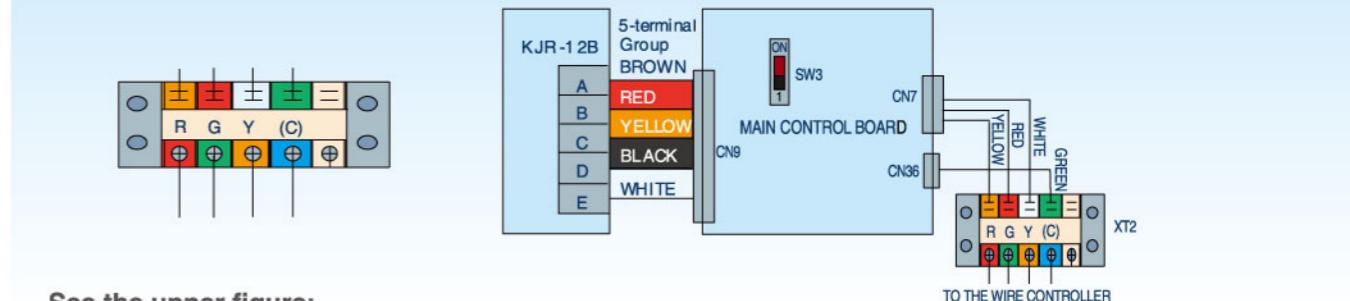

For cooling and heating

Field wiring

To connect with wired controller

Set the dial code SW3 of PCB in roof-top unit's wire control box as per the wired controller you are in using. After settings, please shut off the power supply and then power to it again, otherwise, the new settings function couldn't work.

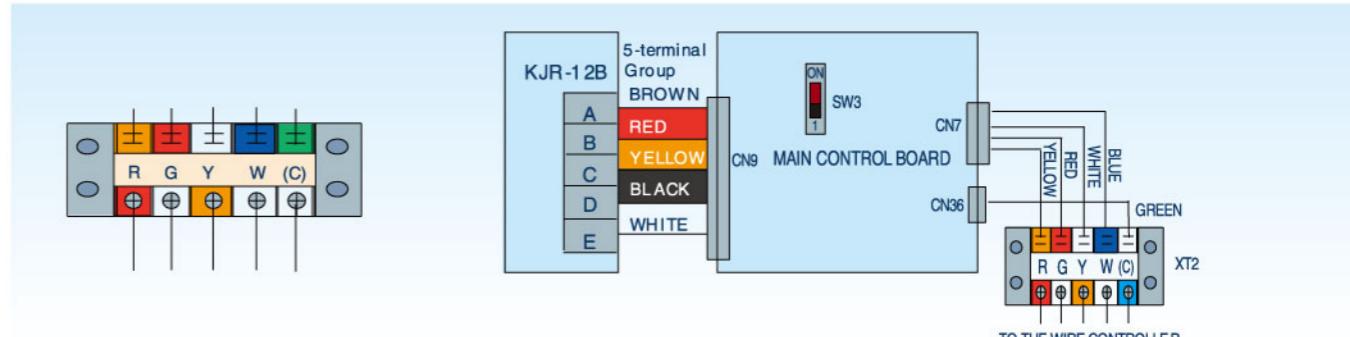

For cooling units

See the upper figure:

- When SW3 has been set in "ON", please select KJR-12B wired controller.
- When SW3 has been set in "1", please select the wired controller be recommended.

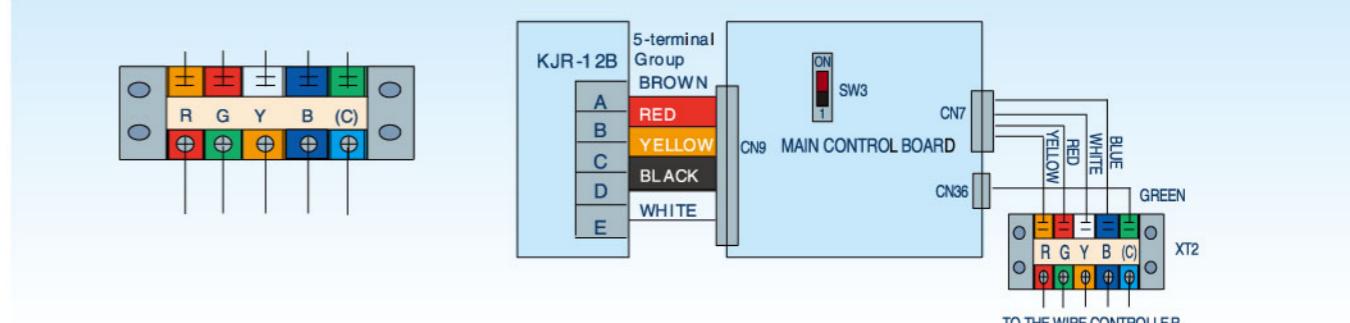

For cooling +PTC units

See the upper figure:

- When SW3 has been set in "ON", please select KJR-12B wired controller.
- When SW3 has been set in "1", please select the wired controller be recommended.

For heating & cooling units

See the upper figure:

- When SW3 has been set in "ON", please select KJR-12B wired controller.
- When SW3 has been set in "1", please select the wired controller be recommended.

Mechanical specifications

General

The units are convertible airflow. The ambient temperature range shall be between 52°C and -10°C as standard from the factory. All units shall be factory assembled, internally wired, fully charged with R-410A, and 100% run tested to check cooling and heating operation, fan and blower rotation, and control sequence before leaving the factory. Wiring internal to the unit shall be colored and numbered for simplified identification. The unit is provided with an integral weather resistant control panel.

Casing

Unit casing shall be constructed of zinc coated, heavy gauge, galvanized steel. Exterior surfaces shall be cleaned, G90 galvanized heavy gauge plate conforming to ASTMA 653, followed by baked on electrostatic polyester dry powder coat paint on all external panels, completely weatherized for outdoor installation and properly reinforced and brazed. Salt spray test for steel sheet under 1000 hours, specially treated can be up to 2000 hours and even more. Cabinet construction shall allow for all maintenance on one side of the unit, only the unit with auxiliary electrical heater shall allow for maintenance on two sides. Service panels shall be removed easily and reinstalled by removing bolts. All panels and top covers indoor side of the unit shall be insulated with 16 mm, foam-faced (foil-faced only for 5ton), closed-cell insulation. The unit has provisions for forklift and crane lifting, with forklift capabilities on four sides of the unit.

Compressors

All units shall have direct-drive, hermetic, scroll type compressors with centrifugal type oil pumps. Motor shall be suction gas-cooled and shall have a voltage utilization range of plus or minus 10 percent of unit nameplate voltage. Internal overloads shall be provided with the scroll compressors.

Compressors used in Rooftop package unit are hermetically sealed reciprocating type. They are equipped with a crankcase heater as standard.

The compressors, incorporating a built in muffler, are mounted on springs within a heavy gauge steel housing to give a low noise level.

The unit contains the best compressor technology available to achieve the highest possible performance. Dual compressors are outstanding for humidity control, light load cooling conditions and system back-up applications. Dual compressors are available on 12.5 to 20 ton models.

Controls

The unit shall be completely factory-wired with necessary controls and terminal block for power wiring. The unit shall provide an external location for mounting a fused disconnect device.

Microprocessor controls provide for all 24V control functions. The precision control shall make all heating, cooling, or ventilating decisions in response to electronic signals from sensors measuring indoor and outdoor temperatures. The control maintains accurate temperature control, minimizes drift from set point, and provides better building comfort. A centralized microprocessor shall provide a higher level of machine protection.

Evaporator and condenser coils

Internally finned, 7.94 mm (5/16 inch) copper tubes mechanically bonded to a configured hydrophilic aluminum fin shall be standard. Coils shall be leak tested at the factory to ensure the pressure integrity. The evaporator coil and condenser coil shall be leak tested to 3100 kPa (450 psig). A removable, double-sloped condensate drain pan with through the base condensate drain is standard.

Filters

Washable filters shall be standard on all units.

Evaporator fan

Evaporator fan is of centrifugal forward-curved blade design capable of handling total required CFM and static pressure in the low and the medium ranges. Casings are made of galvanized steel. Blower motors are of open drip proof type (totally enclosed types are optional) and conform to NEMA MG-1 and MG-2. Blower motor is mounted on adjustable base and secured by locking device. Fan wheels shafts and bearing are selected to operate at 25% below first critical speed. Pillow block bearing are selected for at 200,000 hours average life at design operating conditions. Shaft is turned, ground and polished from solid steel. Fans and pulleys are keyed to shaft and designed for continuous operation at maximum motor horse power and fan speed. All rotating components and assemblies are statically and dynamically balanced and every unit is vibration tested before shipment from the factory.

Condenser fan

The fan is direct drive by weatherproof motor to ensure reliable continuous operation. Statically and dynamically balanced drive motor design with maintenance-free bearings for outdoor installation. The fan is multi-blade vane-axial type, made of metal material for quiet operation and durability.

Electronic thermostats

General information: A dedicated electronic thermostat is supplied with unit controls as standard. This thermostat controls one or two stage heating and cooling applications. The thermostat normally displays room temperature and mode of operation.

The temperature can be set by up/down buttons for both cooling and heating cycles. The thermostat also allows you to select continuous fan operation, or have the fan on intermittent operation with the equipment. It also displays the status of unit, thus providing maximum information for the end user.

Phase monitoring protection

The unit with 3-phase power supply is equipped with phase monitoring protection as standard. These devices protect motors and compressors against problems caused by phase lack, phase imbalance and phase reversal indication.
